

Cloud Computing Platform
for Enterprise Applications

Cloud Computing Platform for Enterprise Applications

IS Tools is an end-to-end 'Platform as a Service' (PaaS) solution designed for enterprise and corporate use. It delivers a complete environment to create, manage, deploy and effectively run robust Cloud Computing based business applications.

IS Tools allows you to develop and run full blown business applications using only a web browser. Our intuitive point-and-click interface requires no traditional programming or coding. Applications can be completed, deployed and in productive service within only a few days or weeks, resulting in short time to realized value. Further development or management of your application is just as easily performed online, using a web browser.

Public or Private Cloud

The IS Tools PaaS solution gives operational flexibility of your IT. Besides offering external 'public cloud' subscription based operations, the IS Tools PaaS engine can be deployed within a closed network behind a company firewall, a setup often referred to as a 'private cloud'.

IS Tools is a complete PaaS environment to create and run applications aligned to your business processes using only a web browser

IS Tools Product Highlights

- A PaaS engine for creating and delivering on-demand applications on the Web for corporate and enterprise use:
 - build, deploy and operate on an online platform
 - adapt instantly to changes
 - public or private cloud
- Secure and flexible access rights
- Advanced set-up of rules and logical aspects
- Dynamic adaptation in "real-time" while users are online
- Web access and browser based
- Scalable to accommodate for large operations and concurrent usage
- Multilingual support

Subscription or Perpetual licenses

IS Tools is available to your corporation in two service models. The on-demand subscription pay-per-user model eliminating the usual upfront capital investment, or alternatively as an on-premises installation on a license basis. The IS Tools solution gives you freedom of choice to use the model that works best for you.

Save time & money

The IS Tools PaaS engine boosts your IT delivery value chain. Traditional time consuming programming is effectively eliminated, allowing you to invest in time to deliver the valuable business logic and process automation goals of the application. With the IS Tools PaaS solution, business applications are configured and set up in an end-to-end process using only a web browser. All accomplished within a time span of days or weeks.

Examples of IS Tools PaaS solutions

Project Execution Management
Resource Management
Enterprise Content Management
Project Performance Management
Contract Management
Quality Management
Order Information & Delivery Managed Services
Scorecard Management (KPI)
Software Adaption & Configuration Management
Product Control & Management System
Document Management
Business Opportunity Reporting Management
Cost Reporting & Analysis

Speedy Roll-out

PaaS applications are deployed and ready to run the moment they are completed. No complex deployment of a production environment or other service interruptions – just activate your application and start using it!

Secure & flexible access rights

Apart from providing you with a full kit of structures, rules and logical aspects for designing and completing your business application, IS Tools PaaS engine comes with a complete and comprehensive framework for setting up and managing secure access rights for users.

Exports and Imports

IS Tools provides full support for export and import of data and production of reports to common third party formats such as Microsoft Excel and XML. Export of all your data is available at any time.

Databases and Operating Systems

IS Tools is Java EE based and is thus platform independent, running on all versions of Microsoft Windows/Windows Server, as well as most Unix distributions. Drivers are provided to interface with the most common databases, including Microsoft SQL Server, MySQL and Oracle Database.

Professional Services & Support

The company IS Tools also provides product related professional services – highly skilled personnel with experience from many diverse industries. To assist in implementing IS Tools based solutions, we offer the following services:

- Solution Development
- Solution Roll-out
- Solution Support
- Education and Certification

IS Tools has more than 30 000 corporate users in 40 countries
